

### Universe

ultra-deep field view  
finds ten thousand galaxies  
in one-tenth moon's width

Hubble plumbs spacetime  
thirteen billion lightyears yon  
Big Bang's further still

probing past's extremes  
genesis of all we know  
existence before?

my words fail this task  
cosmic scale eludes capture  
unthinkably vast

ours one of many?  
an infinite multiverse?  
my small mind is blown
