

Cosmic Boundaries

after end of time
before beginning of time
beyond edge of space

what's on other side?
Big Bang launched this universe
what was there before?

nonsense questions, these?
human scale fails to answer
need more dimensions?

"empty" space expands
quantum scale's "spooky action"
math sees more than scopes

reality's bounds
exceed imagination
science peeks beyond

A tiny portion of the Universe (Hubble Space Telescope)
